

## Flagship Commercial Facility

Lake Providence, Louisiana

**Myriant is leading the industry in the production of high-value bio-based chemicals.** We make and sell "green" chemicals that are used to make every day consumer applications—from plastics and coatings to clothing fibers and pharmaceuticals—only we make our chemicals from renewable feedstocks instead of petroleum-based sources. Our proven technology platform enables Myriant to deliver high-performing green chemicals at a competitive, more predictable cost versus petroleum-based chemicals, without the need for government subsidies.

Myriant's flagship commercial facility in Lake Providence, LA will produce 30 million pounds of bio-succinic acid annually. Start-up activities are underway and Myriant expects product shipments to commence soon. To keep pace with customer demand, Myriant is planning for expansion both domestically and across the globe.

### FAST FACTS

**CAPACITY:**

30 million pounds/yr  
bio-succinic acid facility

**JOB CREATION:**

- 50+ jobs at the facility
- 450 construction jobs
- 250 indirect jobs

**FUNDING SPONSORS:**

- US Department of Energy (DOE) Cost Sharing Award
- US Department of Agriculture (USDA)
- Lake Providence Port Commission and the Louisiana Department of Transportation & Development

**TECHNOLOGY:**

Our platform combines proprietary biocatalysts and a proven fermentation process capable of using renewable feedstocks to create affordable bio-based chemical intermediates.

**MYRIANT'S BIO-PRODUCT PIPELINE:**

- Succinic Acid
- Acrylic Acid
- Lactic Acid
- Muconic Acid
- Fumaric Acid

Myriant's Lake Providence Commercial Facility for Bio-Succinic Acid

## Partner Perfect: Industry and Government Join Forces to Drive Economic Development

Lake Providence is an excellent example of industry and government partnering to drive growth in rural economies. Our Lake Providence Commercial Facility is partially funded through a \$50M cost sharing award from the United States Department of Energy (DOE), and a \$25M Business and Industry (B&I) Loan Guarantee from the United States Department of Agriculture (USDA). These awards have helped Myriant spur commercialization of its bio-succinic acid and importantly, it has assisted in the creation of 50+ new, direct and highly-skilled jobs, as well more than 400 construction jobs in Lake Providence. It's been estimated that our project will create as many indirect jobs in the surrounding area as well.

Lake Providence was selected as the location of our first commercial facility due its proximity to abundant feedstock in the area, its location along the Mississippi River and the committed support for our project by local and state officials.
